

M. T. "GOLIATH"

GOLIATH is a well equipped sea going tug, but is also particularly well suited to harbour towage, marine civil engineering and barge handling due to her superb manoeuvrability. She is a twin screw tug with a powerful bowthruster, making her capable of manoeuvring in any direction.

She also features a twin drum towing / anchor handling winch and stern roller, hydraulic deck crane, fire fighting water monitors and a twin engine RIB type dinghy.

Goliath will soon be available for charter and a full specification sheet will be available on this web site in due course.
